Examples of Disc Problems

HIVD(The herniation of intervertebral disc)

腰椎椎間盤突出 (Lumbar HIVD)

椎間盤突出的症狀相當多樣化性，若纖維外環尚未被撐破，上面的神經纖維會因為承受不正常的壓力跟局部的發炎反應而引發明顯的下背痛情形；若突出的椎間盤容易造成神經根的壓迫，那會引發相對性神經根的坐骨神經痛和神經症狀，如感覺功能異常、運動功能異常以及闊約肌功能障礙或者是行動不便等。有些人會先經歷嚴重的下背痛，等到纖維外環被撐破，髓核破出後外環壓力減小，下背痛反而減緩，但取而代之的卻是更為難受的坐骨神經痛及其他神經疼痛的症狀。

Spondylosis (degeneration of spine 脊椎退化)

脊椎關節退化（英語：Spondylosis）又稱退化性脊椎炎

椎關節病變和退化性椎間盤疾患指的是椎間盤磨損和撕裂的變化導致脊椎管狹窄現象，這脊椎管狹窄現象會壓迫到神經成分，而使神經功能受干擾，我們幾乎所有人都會有，只是程度上的差別；大於四十歲的人都會有這個問題。

HIVD (椎間盤疝出症)

(herniation of intervertebral disc,
herniation of nucleus pulposus)

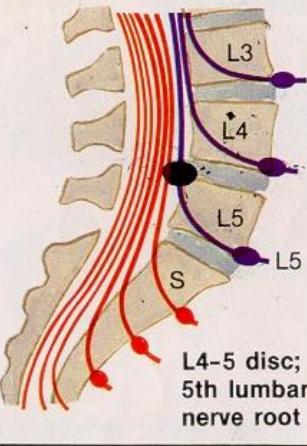

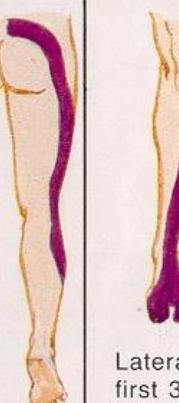

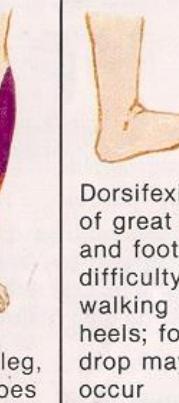

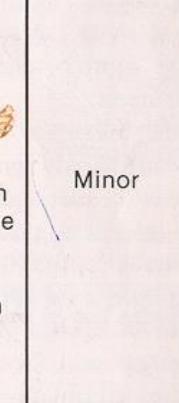

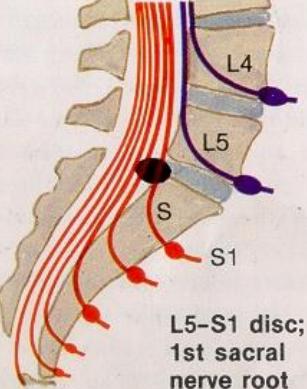

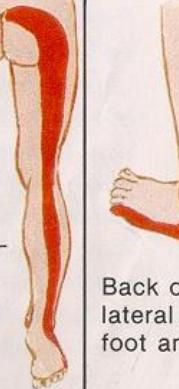

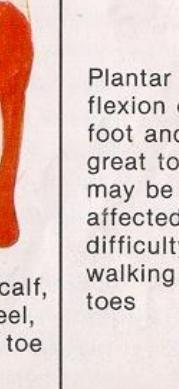

85% occurs in the L4-5, L5-S1 level.

85% are posterio-lateral herniation:

HIVD in L4-5: compressing the L5 nerve root.

HIVD in L5-S1: compressing the S1 nerve root.

Lumbar HIVD

Clinical features of herniated lumbar nucleus pulposus					
Level of herniation	Pain	Numbness	Weakness	Atrophy	Reflexes
 L4-5 disc; 5th lumbar nerve root	 Over sacro-iliac joint, hip, lateral thigh and leg	 Lateral leg, first 3 toes	 Dorsiflexion of great toe and foot; difficulty walking on heels; foot drop may occur	Minor	Changes uncommon in knee and ankle jerks, but internal hamstring reflex diminished or absent
 L5-S1 disc; 1st sacral nerve root	 Over sacro-iliac joint, hip, postero-lateral thigh and leg to heel	 Back of calf, lateral heel, foot and toe	 Plantar flexion of foot and great toe may be affected; difficulty walking on toes	Gastrocnemius and soleus	Ankle jerk diminished or absent

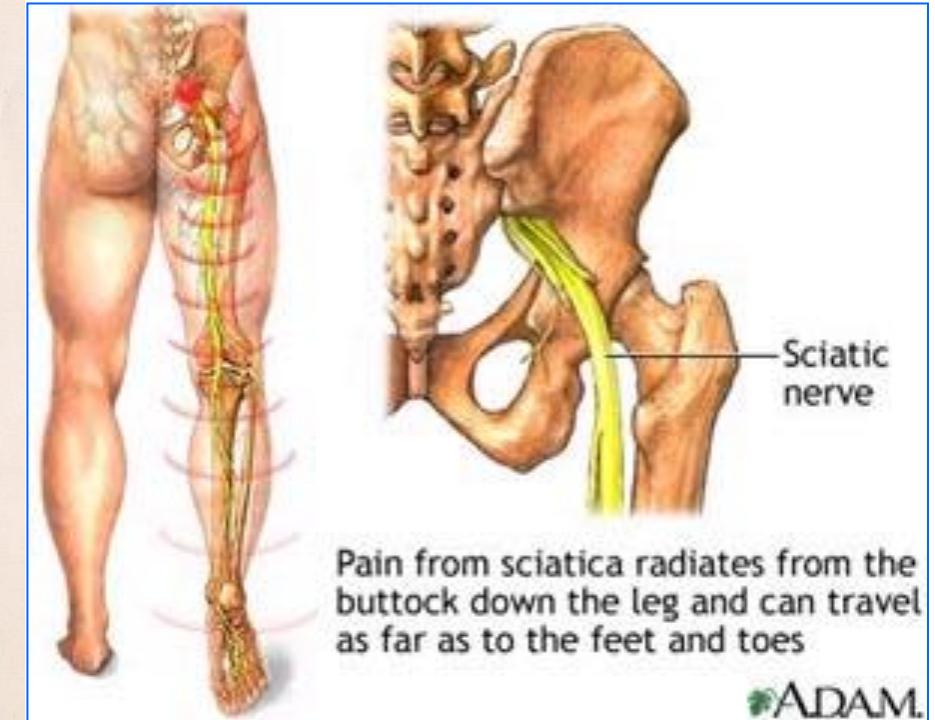

臨床症狀:

Sciatica (坐骨神經痛)

low back pain (下背痛)

Severe HIVD:

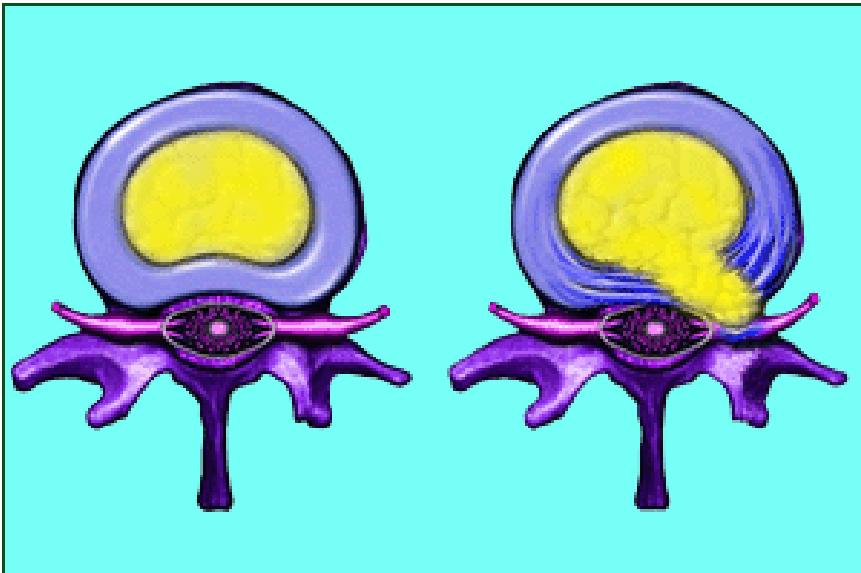

caudal equinal syndrome
(馬尾神經症狀群：大小便失禁)

男/41 disc degeneration and HIVD

2個月前跌倒後引發嚴重的左側sciatica。

(A,B) MRI, T2 STIR, sagittal: L3-4 disc 正常，但disc中間有一條暗線(arrow)，表示disc有輕微退化。L4-5 disc 水份減少，稍暗，且往後bulging out，表示disc退化，
L5-S1 disc 則很嚴重herniation (h)，是annulus 破裂，中間較亮的nucleus 往後擠出(extrusion)。後縱韌帶(posterior longitudinal ligament, pl)被往後推。

(C,D) 這是中間靠左後側之HIVD(h)，嚴重壓迫dural sac 及左側S1 nerve root (s1)。右側S1 nerve root (s1)正常。

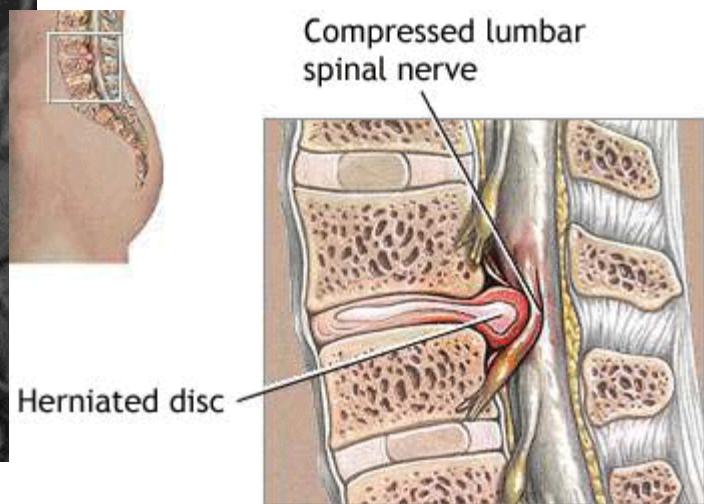

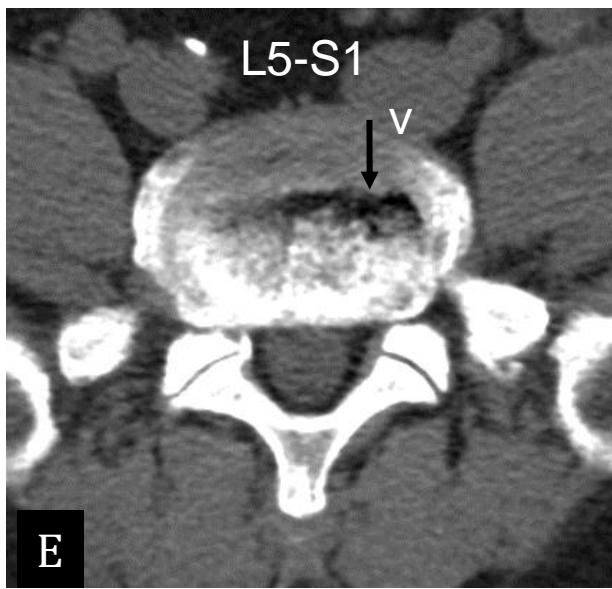

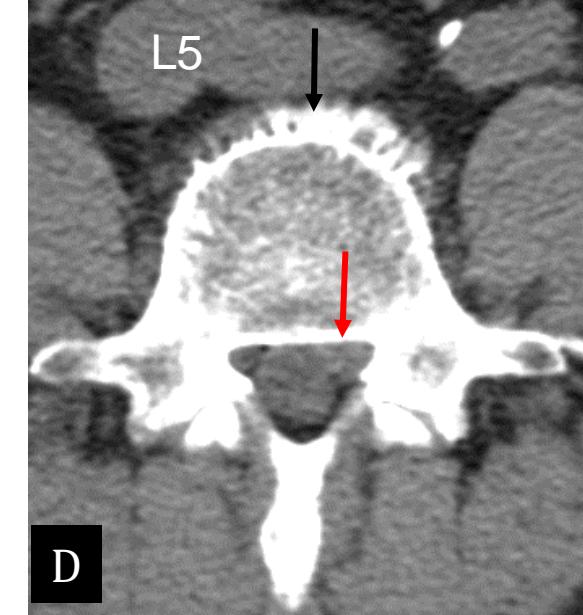

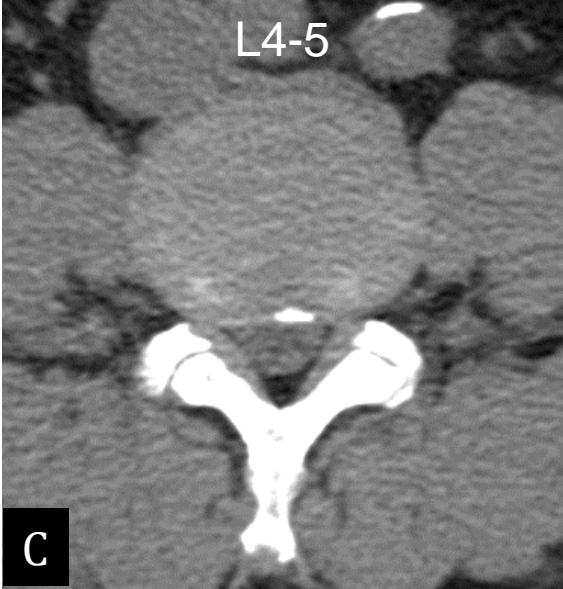

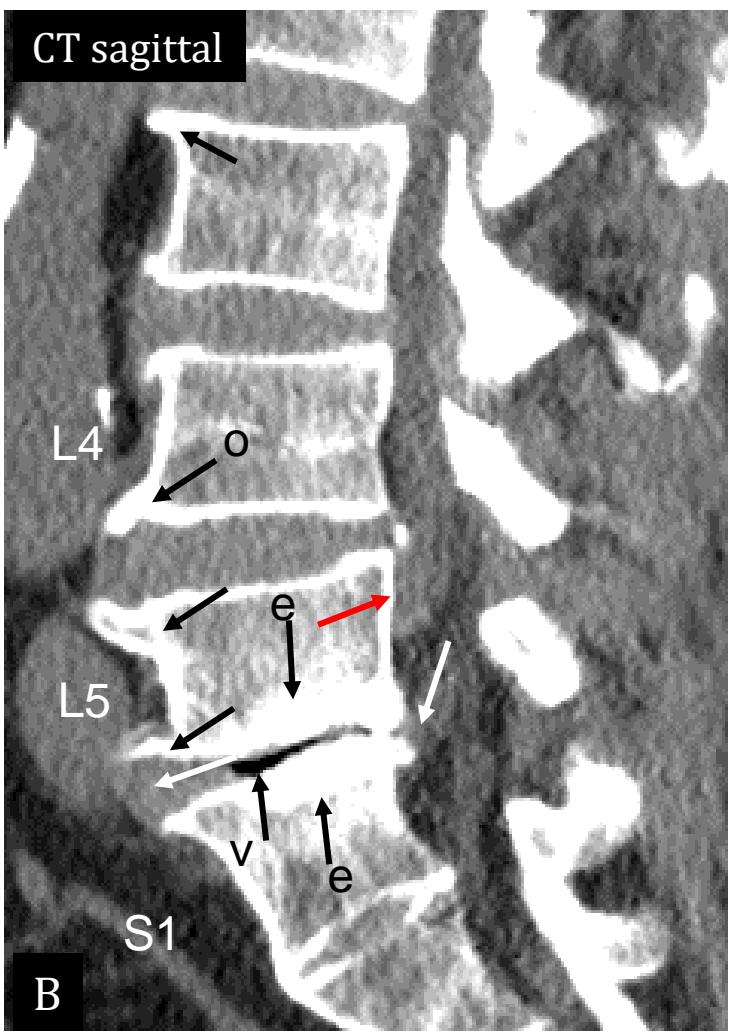

女/45 HIVD and ruptured disc

L5-S1 disc 變矮，表示有退化。

Annulus破裂，裡面的nucleus往左後疝出(arrows)，而且斷裂，往下游離。

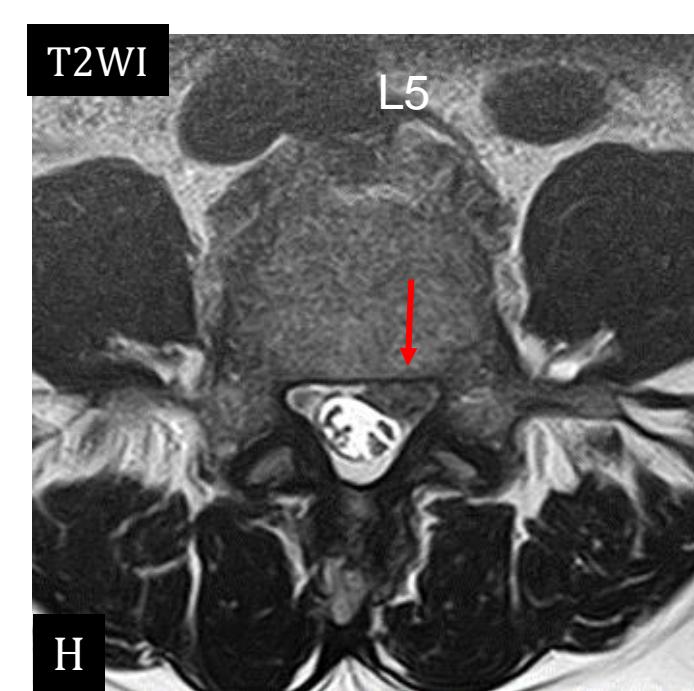

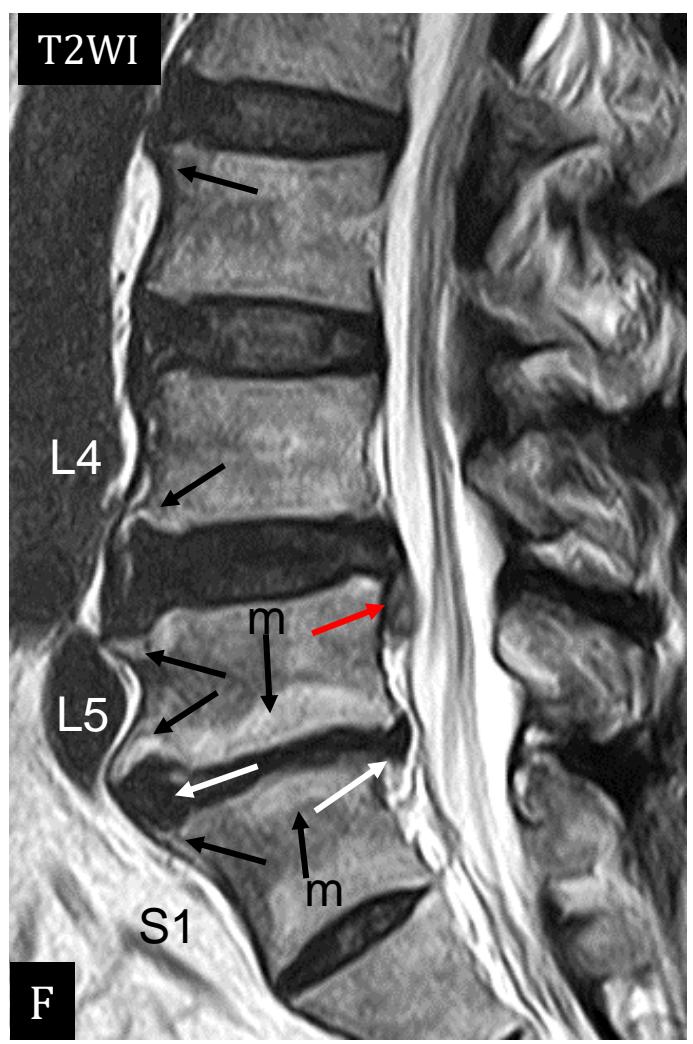

這是典型的、嚴重的HIVD，是extrusion with sequestration (擠出加游離)，疝出的nucleus離開disc母體。

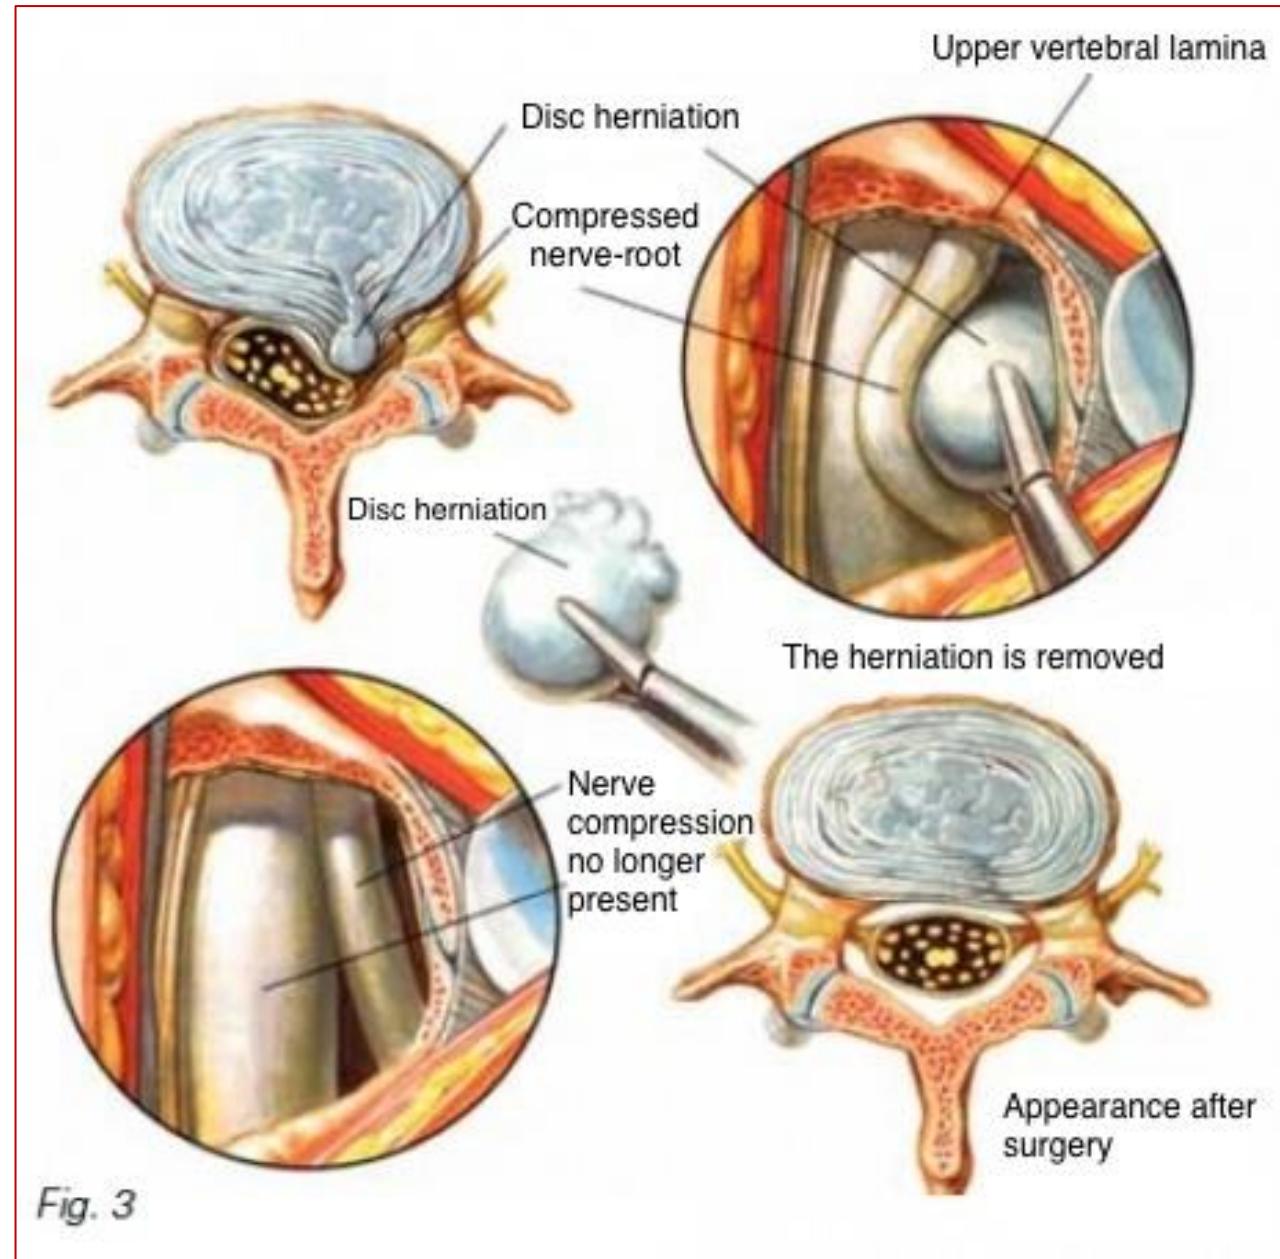

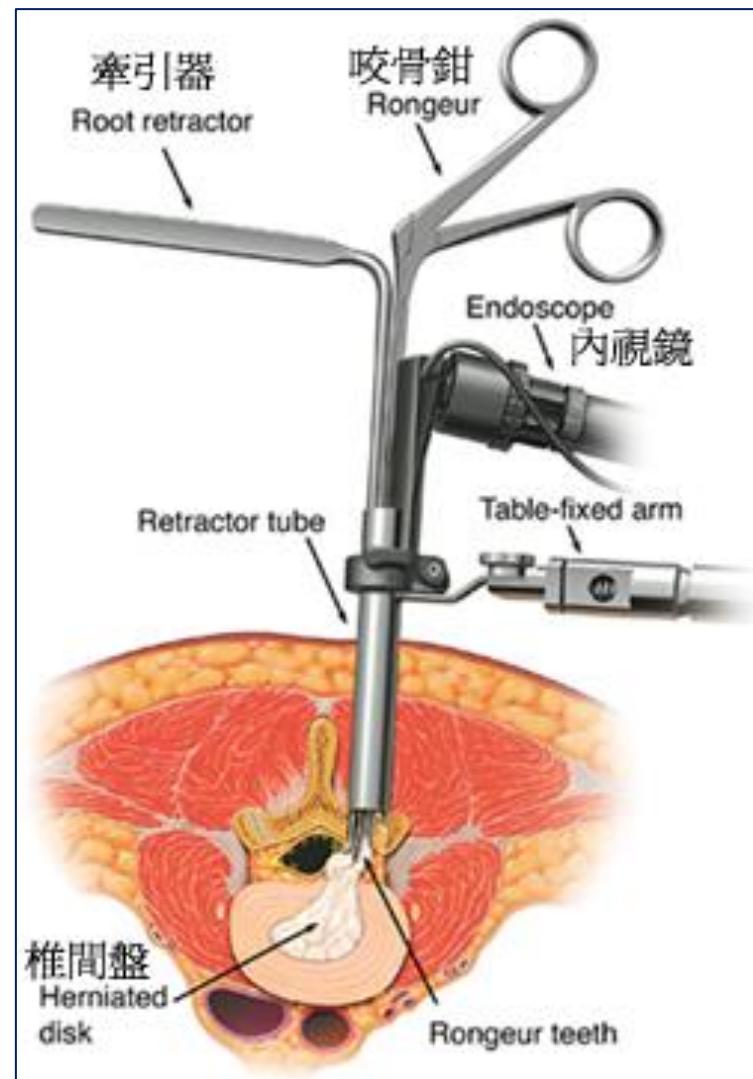

左側sciatica

(B-E) CT: 每一節都有骨刺(o: osteophyte) ,
L4-5: 在L5後方可見局部disc往左後下疝脫(herniation) (red arrow) , 這是HIVD 。
L5-S1: disc 嚴重狹窄而且前後膨出(bulging out, white arrows) , 且含空氣(v: vacuum) , 表示嚴重disc degeneration 。
L5 inferior endplate, S1 superior endplate 都變象牙白(e: eburnation) 。

(F-I) MRI: 看到與CT 相同的變化，對L4-5 HIVD比CT清楚(red arrow)。
L5-S1 之disc前後左右膨出 (white arrows)
及水分乾燥變暗，但看不到disc 內的vacuum。
L5,S1 endplates 呈現Modic type II
degeneration (m) 相對應CT所見之
eburnation。

Degenerative lumbar spondylosis

脊椎退化

Degenerative lumbar spondylosis:

脊椎退化(degenerative spondylosis)

脊椎退化涵蓋:

Intervertebral discs退化: 高度變矮、水分減少、內含空氣, bulging out, HIVD。

Vertebral bodies退化: 長骨刺(osteophyte or spur), Modic changes, Schmorl's node.

Facet joint退化: 因 osteoarthritis (OA) 肥厚長骨刺。

Ligaments退化: 肥厚、鈣化、骨化(ossification)。

Spondylolysis.

Spondylolisthesis, retrolisthesis.

以上病變引起spinal canal stenosis以及neuroforamen stenosis, 壓迫脊椎神經，在頸椎、胸椎也會壓迫spinal cord.

Degenerative lumbar spondylosis

脊椎退化

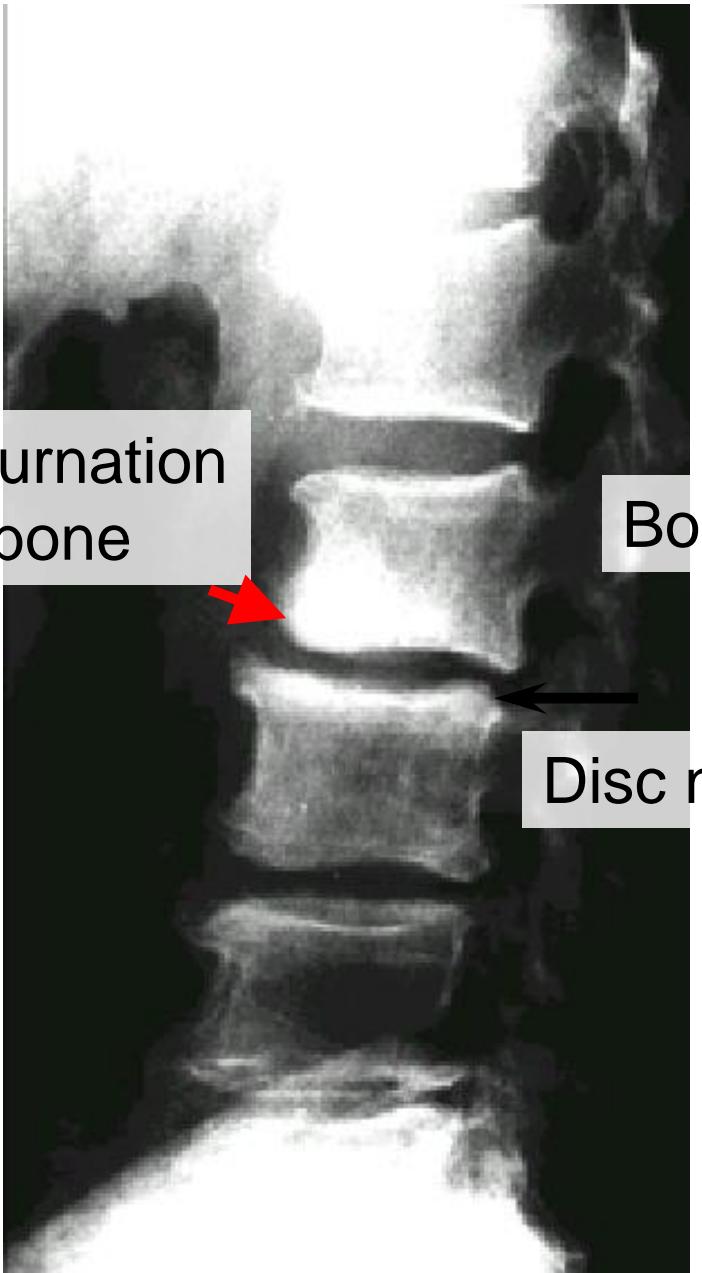

The above lesions causes:

- Stenosis of central spinal canal (脊椎腔狹窄).....
low back pain, claudication, caudal equinal syndrome.
- Stenosis of lateral recess or neuroforamen.....**root pain.**

男/53，腰椎退化，十年之間的變化

Degeneration spondylosis可能自年輕就開始，而且變化緩慢。此53歲男性長年有腰酸背痛的困擾，偶爾sciatica。

(A) 43歲時X-ray，可見L3、4前緣長小骨刺(o)，L5有spondylolysis(sp)。

(B) 同時間MRI多看出L2、3、4之endplates有Schmorl's nodes(s)。除L1-2 disc較亮之外，其餘discs都稍暗，表示水分減少，L4-5 disc bulging out (b)。

(C) 10年後53歲，X-ray: 最明顯的變化是L3-4 disc變得很矮(d)，骨刺稍微變大，L3對L4有輕微retrolisthesis(r)，L5 spondylolysis更明顯(sp)，L5對S1有輕微滑脫 spondylolisthesis(sl)。

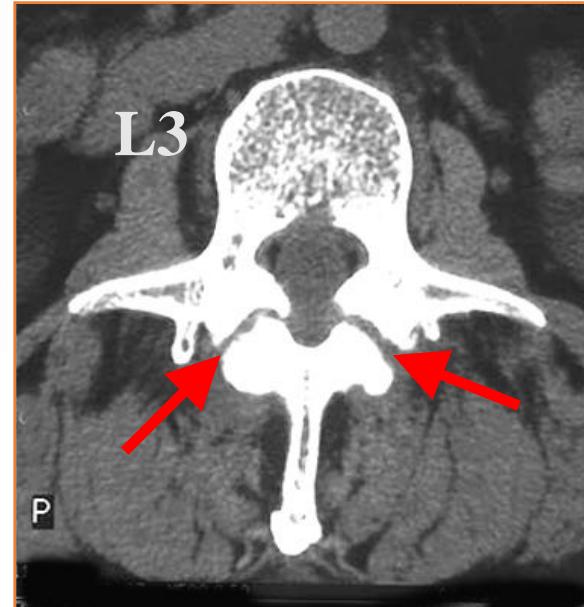

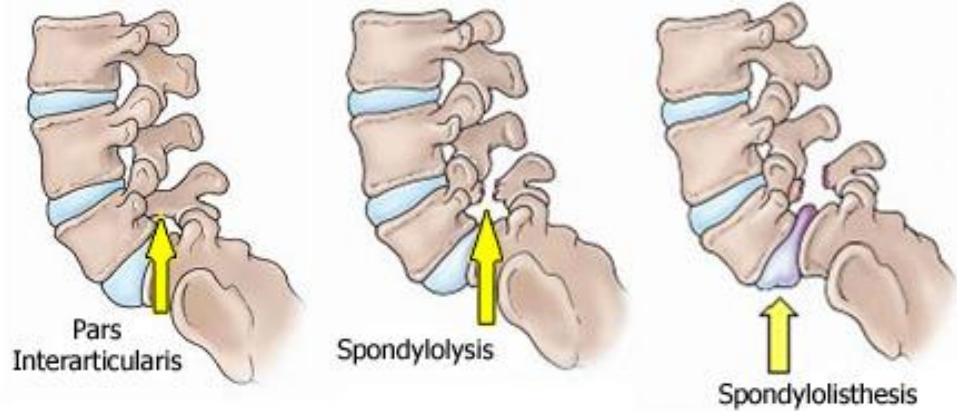

(D) 同時間MRI多看到L3,4 endplates有Modic II退化(m)，L3-4 disc更矮且bulging out(b)，L5-S1 spondylolisthesis(sl)及disc bulging(b)。Schmorl's nodes (s)沒有變化。

(B) L4-5滑脫(spondylolisthesis)，表示腰椎退化(degenerative spondylosis)。X光無法看到脊椎腔情況。

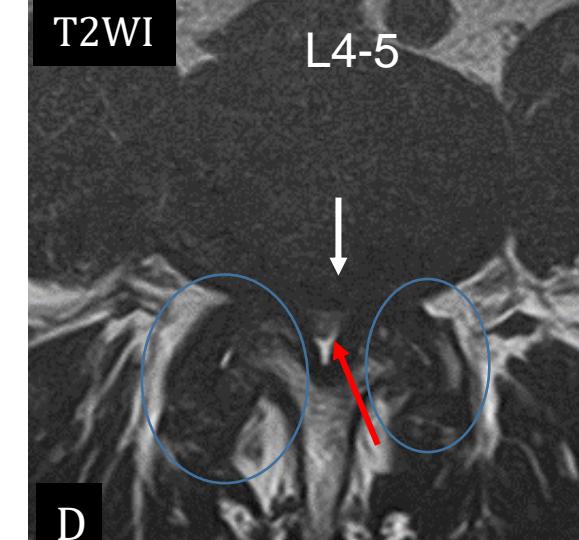

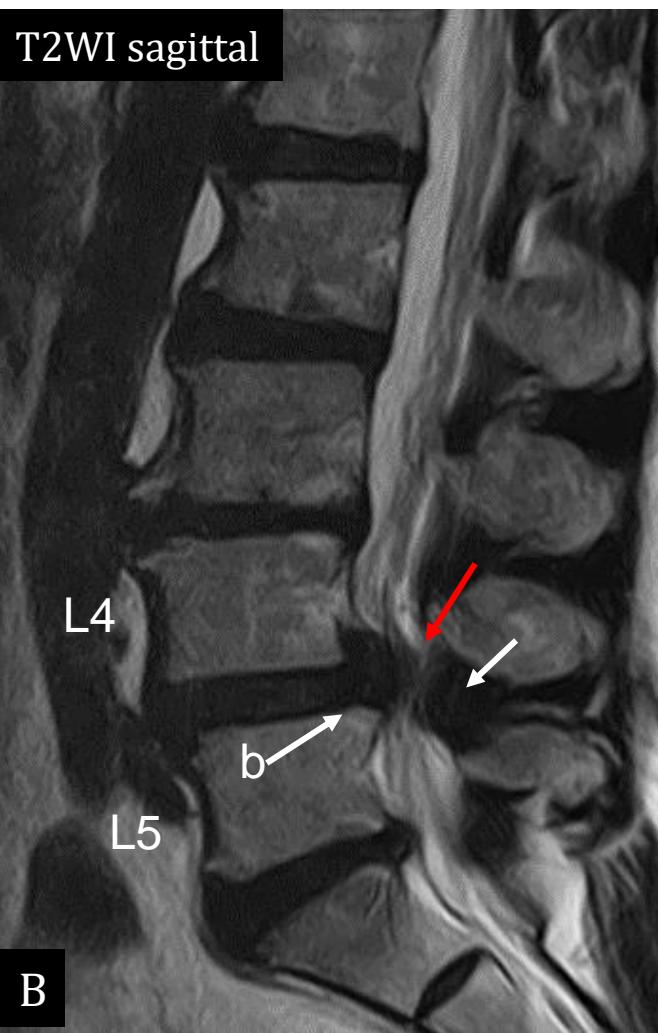

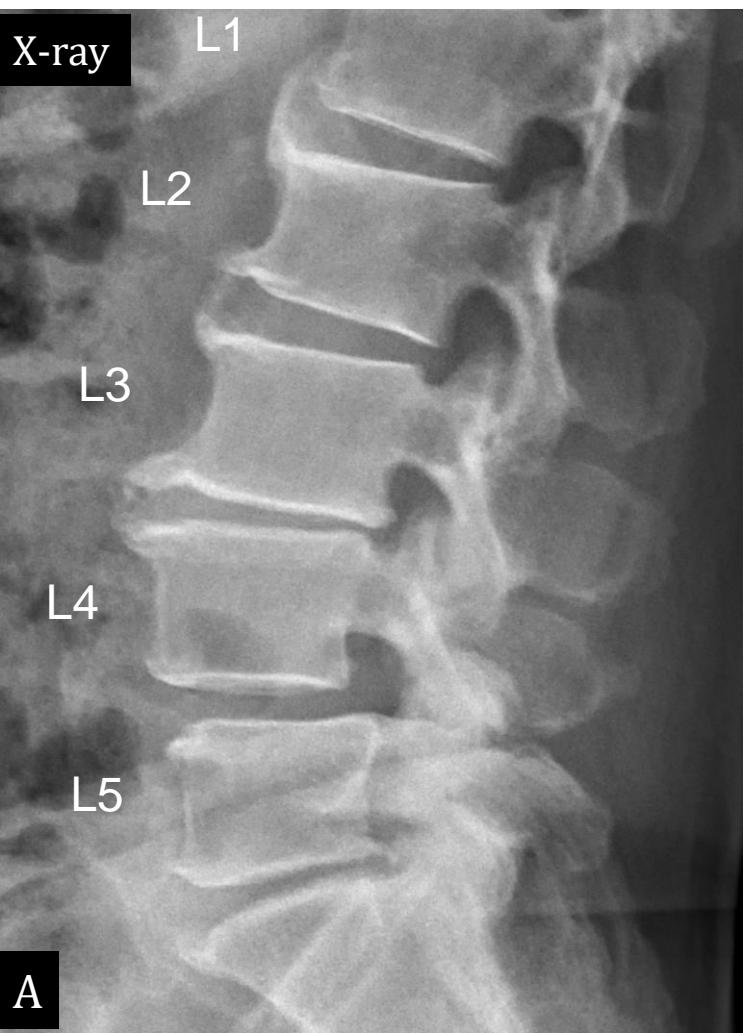

(B-D) MRI可見L4-5脊椎腔嚴重狹窄 (spinal canal severe stenosis) (red arrow)，乃因disc膨出(b: bulging out)，雙側小面關節退化長骨刺且肥厚(circles)，以及L4-5滑脫所共同造成的。

男/30，椎弓斷裂 (spondylolysis)

(A) X-ray可見L4的下關節突(inferior articular process)有斷裂(white arrow)，這稱為spondylolysis，L4-5輕微滑脫(spondylolisthesis)。

(B,C) MRI,T1WI可見spondylolysis (white arrow)。

四種年齡

聯合副刊

我正忙著工作，護士帶來一位女士，說病患頗為腰痛所苦，問能否提早做電腦斷層檢查？我看申請單上描述的是位五十五歲病人，就對著這位打扮得很得體、看起來四十出頭的女士說：「好，請馬上去帶妳婆婆來檢查。」「是我自己啦，什麼我婆婆！我有這麼年輕嗎？」意外被誤認年輕十多歲的喜悅笑容掩過她原來病痛的愁苦。

檢查完後，我看了X光片，心裡暗自驚訝，一個五十五歲的人，腰椎怎麼會退化到像七十歲呢？骨頭長出許多骨刺，椎間盤乾燥而膨出，脊椎腔因而狹窄壓迫神經，難怪病患經年腰痠背痛。

眼前這位外貌與實際年齡、骨頭年齡都不一致的女士問我該怎麼辦？我勸說再去看復健科醫師，適當的物理治療應該可以改善症狀。同時勸她多運動，保持愉快的心情。畢竟，實際年齡會增長，骨頭會退化，外貌也難長久維護，唯有努力保持心理年齡的年輕最有助於健康。

男/60 僵直性脊椎炎 (ankylosing spondylitis)

(A) X-ray, 腰椎: 可見腰椎被雙側邊緣韌帶骨贊連結(syndesmophyte)(1)，使脊柱像竹子(bamboo spine)。中間有dagger sign(2)，此乃因spinous process之韌帶骨贊所造成。雙側SI joints也失去關節空間，融合在一起(3)。

(B) X-ray, 胸椎: 胸椎也可看到雙側邊緣韌帶 syndesmophyte (1)及dagger sign (2)，但比較不清楚。

(C, D) X-ray, 頸椎；雙側邊緣韌帶 (syndesmophyte)(1) 較不清楚，沒有dagger sign; lateral view 可清楚看到anterior syndesmophyte (4)。

僵直性脊椎炎 (ankylosing spondylitis)

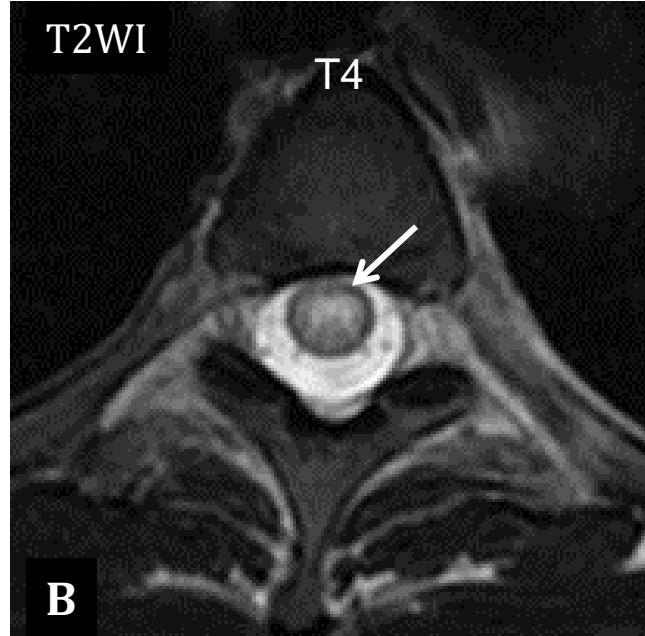

Chest X-ray and CT:
Ankylosing spondylitis.

Inflammations of Spinal Cord

- Myelitis
- Radiation myelitis
- Polio-like myelitis
- Enterovirus myelitis

Diagnostic tools:

- MRI

女/27，橫貫性脊髓炎(transverse myelitis)

SLE患者，突然雙腿無力，下肢失去感覺。

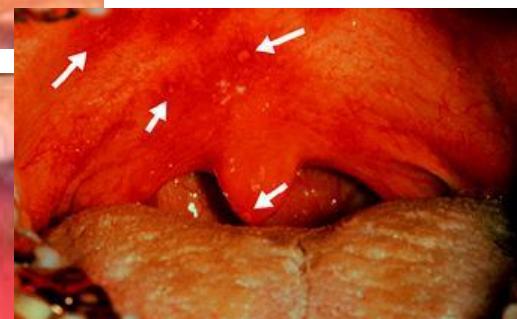

(A)MRI, T2WI: 可見胸椎spinal cord長條形高訊號病灶(arrows)。

(B) 橫切面可見spinal中間大部分區域變亮，這是myelitis的徵象。

對SLE患者，這是一種transverse myelitis。

手足口症

herpangina

**Hand foot mouth disease (HFMD)--
vesicles & ulcerations on the hands, feet, lips**

HFMD is caused by viruses that belong to the enterovirus genus (group). This group of viruses includes

Polioviruses

Coxsackie viruses

Echoviruses

Enteroviruses.

Coxsackievirus A16 is the most common cause of HFMD, but other coxsackie viruses have been associated with the illness.

Enteroviruses, including enterovirus 71, have also been associated with HFMD and with outbreaks of the disease.

上周 3萬幼兒染腸病毒 1020606

腸病毒克沙奇 A6型病童除了全身，連臉上都常滿布水泡，家長想忽略也難，研判應是今年急診就診率創近年同期新高的原因。（林口長庚醫院兒童感染科主任黃玉成、讀者提供）

Hyperintensity in the posterior aspects of pons,
medulla oblongata and central portion of midbrain

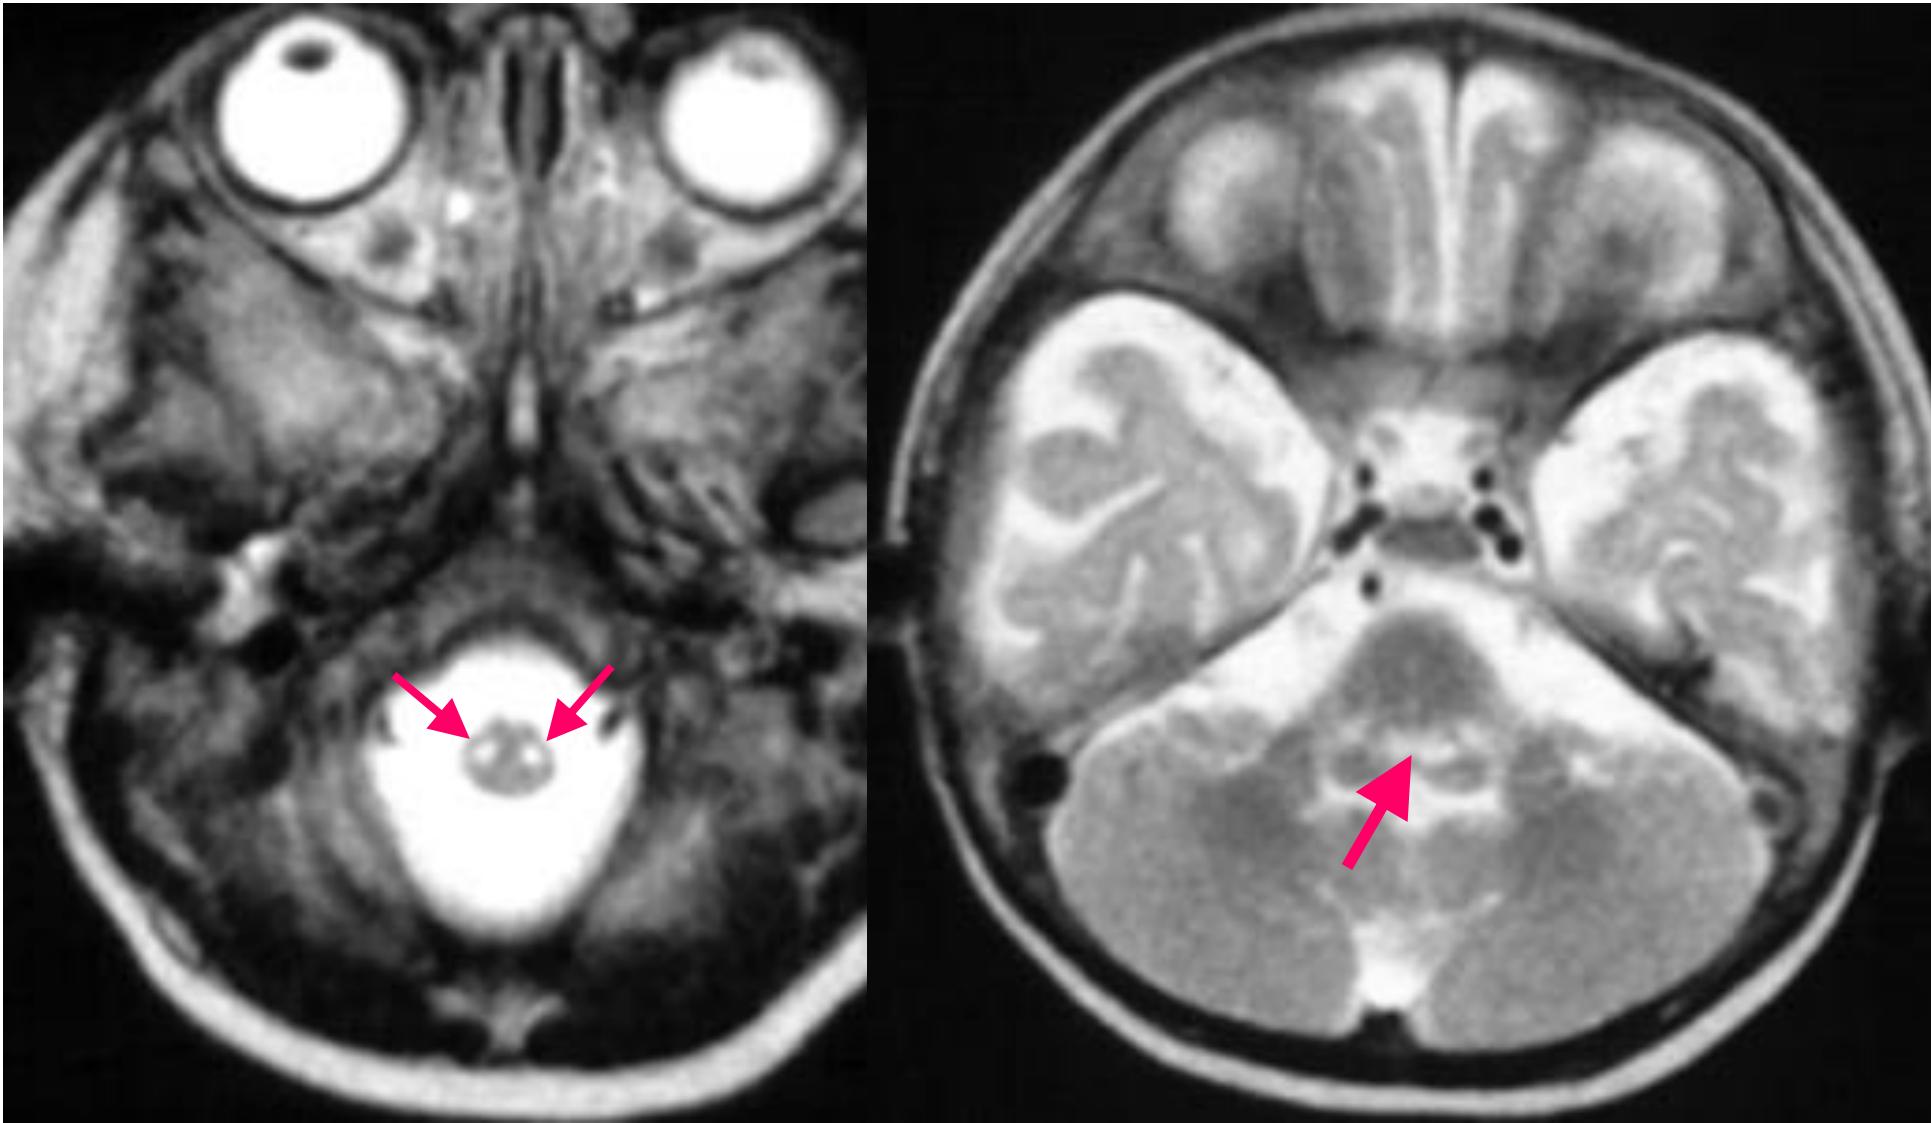

Female, 2 y/o

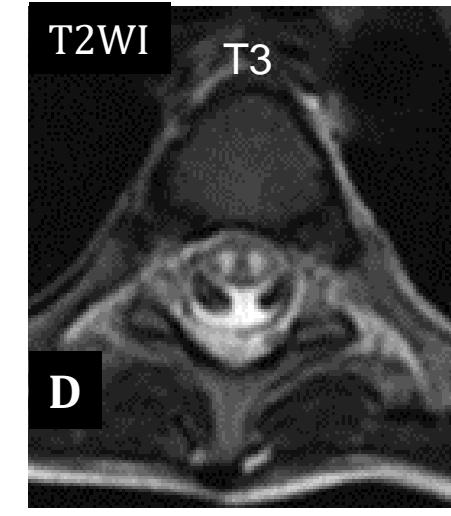

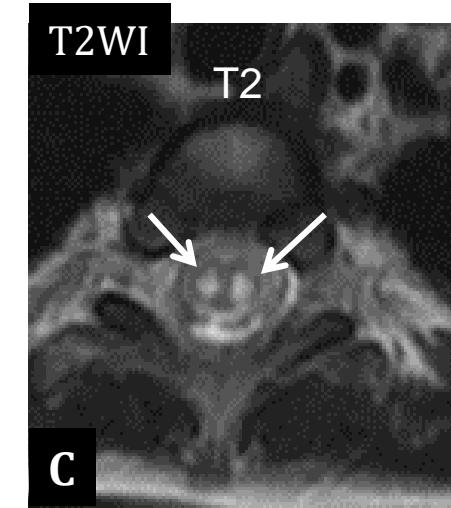

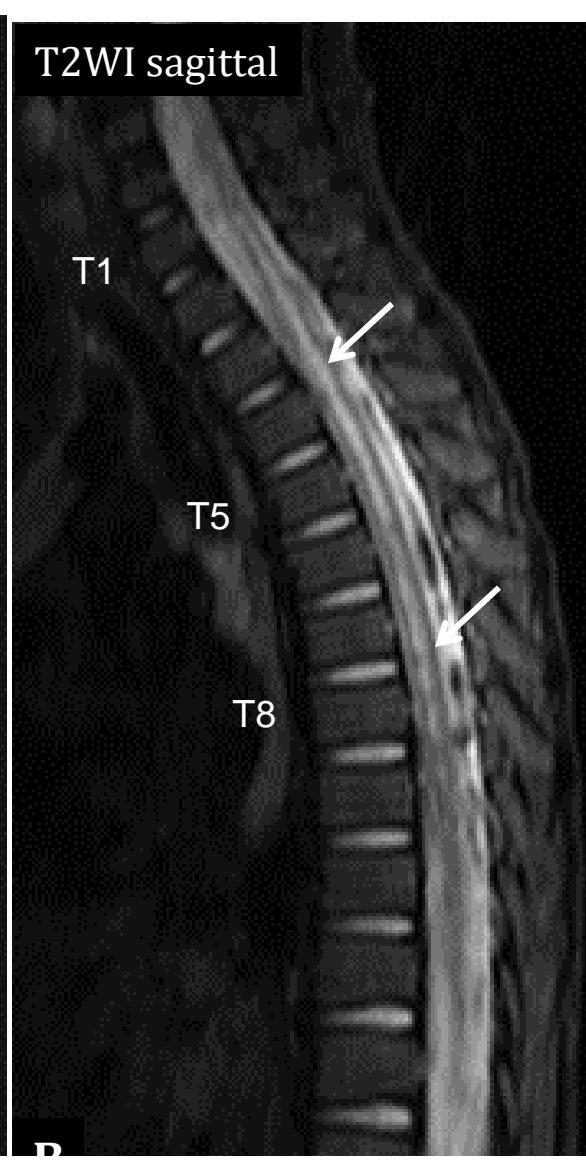

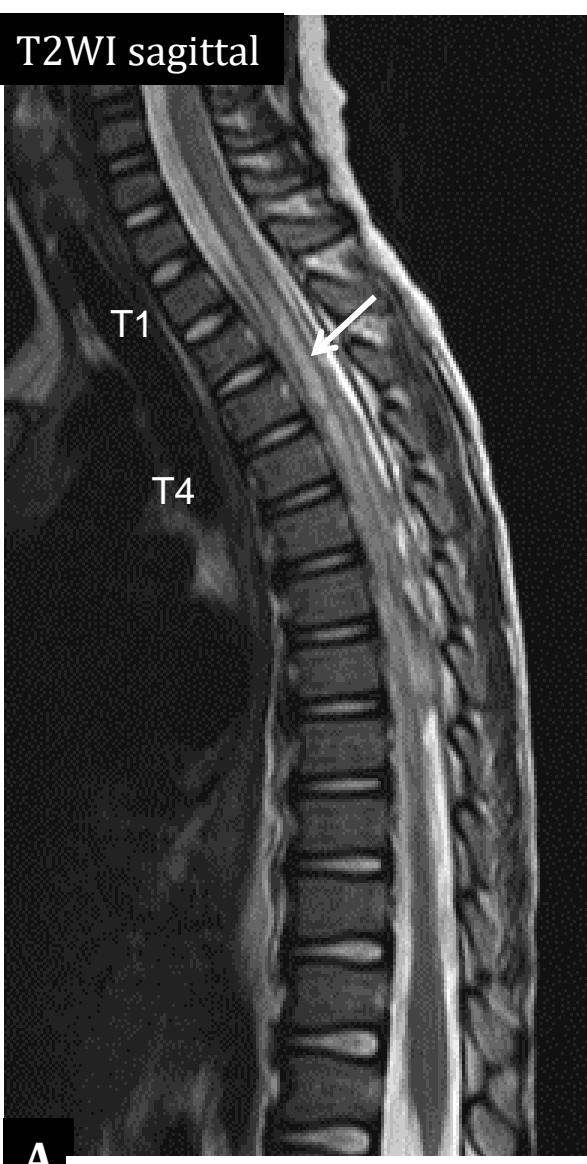

Patient was admitted at July 10

MRI was performed at Oct 16

patient was in vegetate state, and was on respirator

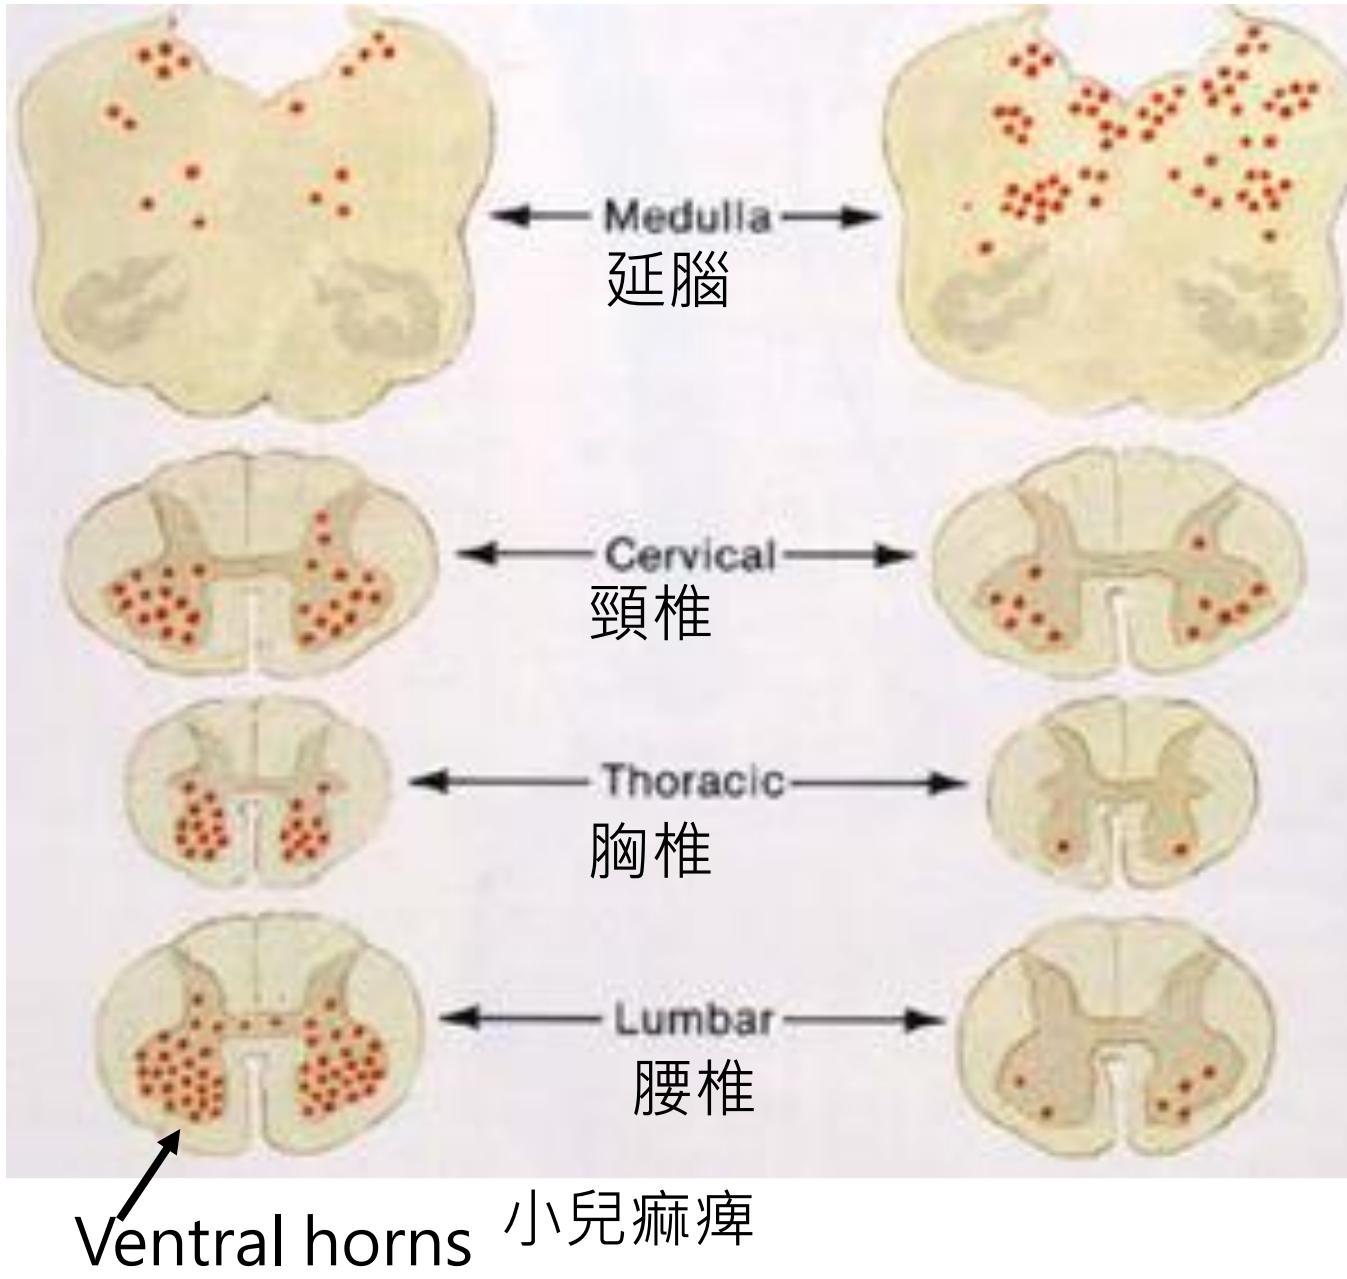

Old brain tissue damages in the bilateral dentate nuclei of cervical spinal cord, and in the posterior portion of the medulla

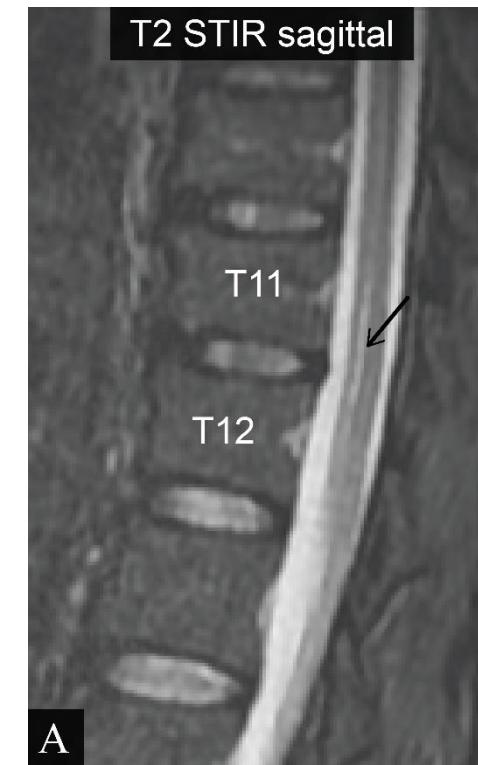

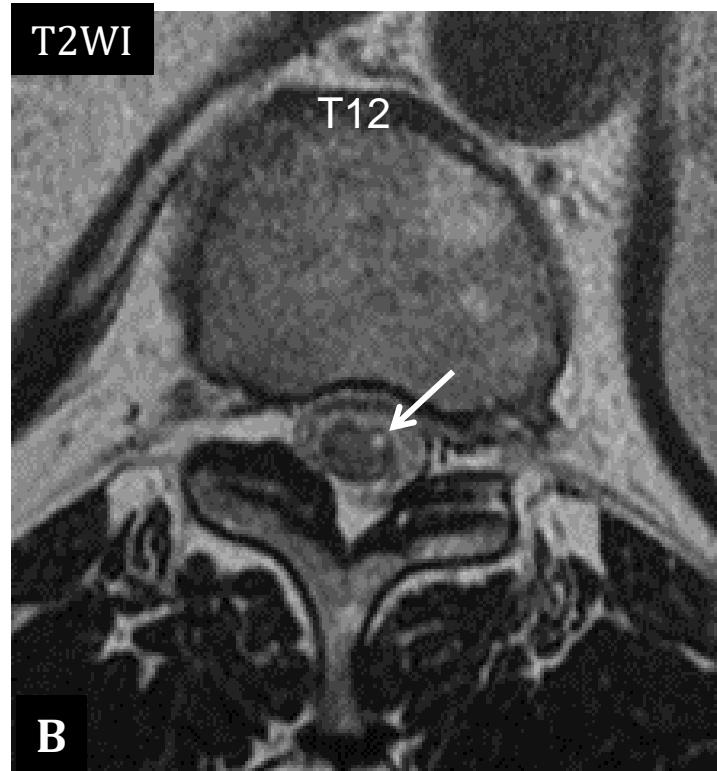

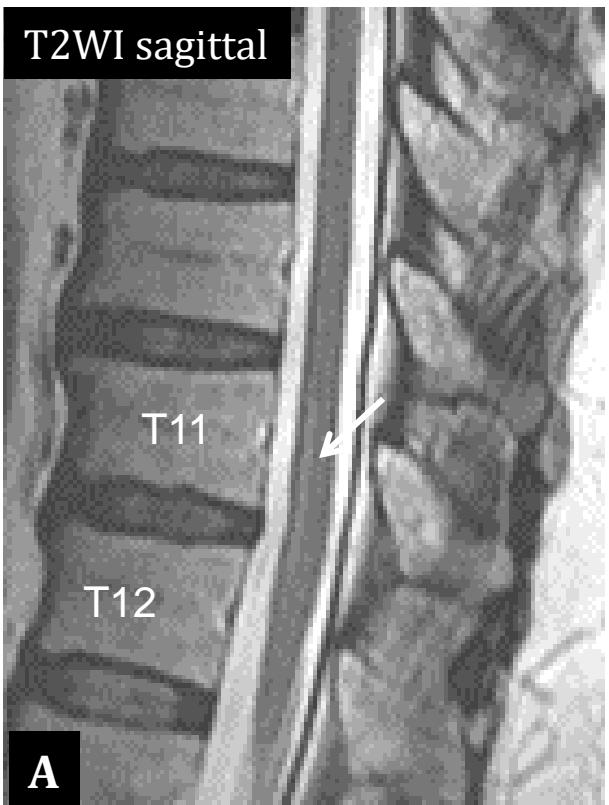

A 女/4，腸病毒脊髓炎(enteroviral myelitis)

發燒、手足口症(hand-foot-mouth disease)，突然雙腿無力。

(A-D)MRI, T2WI: 脊髓在T1-8有一長條型高訊號病灶(arrows)，是脊髓炎myelitis徵象。橫切面可見這是雙側ventral horns高訊號(arrows)，是典型的 enterovirus71型引起的myelitis。

男/62，poliomyelitis後遺症

病人自幼時感染小兒麻痺症，之後就一直左側下肢萎縮無力，

(A,B) MRI, T2WI: 這是62歲時做健康檢查，發現脊髓在T11-12有一條白線。Axial section可見脊髓左側萎縮，中間ventral horn有一小白點，這是典型的poliomyelitis後遺症。
